**DETAILED ACTION**

***Information Disclosure Statement***

1. The information disclosure statement (IDS) submitted on 03/26/2009 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

***Allowable Subject Matter***

2. Claims 1-14 are allowed over prior art of record.
3. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, none of the prior art references of the record, either stand-alone or in combination, teaches an axial spring element wherein an inner diameter of the inner ring forms a clearance fit with an outer diameter of the rotor shaft, thereby simplifying axial installation and axial backlash compensation of the spring element, wherein the rotor component and not the rotor shaft is configured to perform radial guidance of the spring element, and wherein for assembling the electrical machine, the axial spring element is fixed in position at least axially on the pre-installed rotor, such that the rotor is insertable overhead via a blind assembly into the roller bearing, which was previously installed in housing part.

Regarding claim 12, none of the prior art references of the record, either stand-alone or in combination, teaches an electric machine in a motor vehicle with a rotor shaft in a housing via a roller bearing, an axial spring element having inner and outer rings interconnected in an axially resilient manner wherein the outer ring is connected with the rotor component for a joint rotation relative to the housing part, the outer ring is

attached directly to an end face of the armature lamination core and wherein the outer ring includes a radial, circumferential outer wall with a cylindrical outer surface that forms a press connection with a cylindrical recess in the rotor component.

Regarding claim 13, none of the prior art references of the record, either stand-alone or in combination, teaches an electric machine in a motor vehicle with a rotor shaft in a housing via a roller bearing, an axial spring element having inner and outer rings interconnected in an axially resilient manner wherein the outer ring is connected with the rotor component for a joint rotation relative to the housing part, the outer ring is attached directly to an end face of the armature lamination core and wherein the outer ring is fixed in position axially on the rotor component using a detent connection, a rear section, a bayonet connection or a material deformation.

Regarding claim 14, none of the prior art references of the record, either stand-alone or in combination, teaches an electric machine in a motor vehicle with a rotor shaft in a housing via a roller bearing, an axial spring element having inner and outer rings interconnected in an axially resilient manner wherein the outer ring is connected with the rotor component for a joint rotation relative to the housing part and wherein the outer ring is attached directly to an end face of the armature lamination core and wherein on the lamination core, a recess is formed, wherein the outer ring engages in the recess to form the recess, some of said lamella layers have a larger annular recess than an uppermost lamina layer on an end face of the rotor component.

JP 05030701 disclose a motor comprising: a pre-load bearing, a coil spring having a flat surface part, brought into press contact respectively with a rotor and an inner ring of a bearing shaft bush to fit slidably to a shaft.

US 5959381 disclose dual rate spring for bearing retention, wherein the inner portion of the spring element defines a thrust portion.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to NAISHADH N. DESAI whose telephone number is (571)270-3038. The examiner can normally be reached on M-F.
